

SAIC Recognized for Excellence in Greenhouse Gas Management

March 20, 2013

Company Receives Goal Setting Certificate from Center for Corporate Climate Leadership for Commitment to Reducing GHG Emissions

MCLEAN, Va., March 20, 2013 /PRNewswire/ -- Science Applications International Corporation (SAIC) (NYSE: SAI) was awarded the Excellence in Greenhouse Gas (GHG) Management Goal Setting Certificate by the U.S. Environmental Protection Agency's Center for Corporate Climate Leadership. The certificate recognizes organizations that publicly report and verify corporate GHG inventories and set aggressive GHG emissions reduction goals. SAIC was selected from a pool of applications reviewed by the EPA, Association of Climate Change Officers, Center for Climate and Energy Solutions, and The Climate Registry.

In 2011, [SAIC announced](#) its goal of reducing global scope 1 and 2 GHG emissions by 25 percent by 2020. Scope 1 emissions are direct GHG emissions from sources owned and controlled by SAIC, and scope 2 emissions include indirect GHG emissions resulting from off-site power generation, heating and cooling, or steam generation that SAIC doesn't control but purchases.

As the owner of 20 percent of its own office space, SAIC plans to reduce emissions by disposing of real estate assets that are either underperforming or underutilized and consolidating other spaces for a net reduction in square footage. SAIC is also pursuing and will administer energy efficiency projects in its office spaces, educating employees, and raising awareness about the contributions they can make to reduce energy use.

"We're honored that our commitment to integrating sustainable principles into our corporate culture and operations has been recognized by the EPA's Center for Corporate Climate Leadership," said Joe Craver, president of SAIC's Health and Engineering Sector. "We will continue to identify and implement cost-effective energy efficiency projects across the company and leverage our broad in-house energy expertise to achieve our aggressive emissions reduction goal."
