

SAIC to Demonstrate Quality Measures Reporting At the HIMSS 2011 Interoperability Showcase

February 14, 2011

(ORLANDO, Fla.) Feb. 14, 2011 – Science Applications International Corporation [NYSE: SAI] will demonstrate how it is helping to improve the quality, efficiency and safety of healthcare through solutions expediting quality measures reporting at the 2011 Annual Healthcare Information and Management Systems Society (HIMSS) Conference and Exhibition Interoperability Showcase February 21-24, at the Orange County Convention Center in Orlando.

During the showcase, SAIC will demonstrate expertise in informatics and standards to illustrate a solution for measuring and reporting patient care quality metrics. Using a Health Level Seven (HL7) based format, SAIC created a repository to store quality measures definitions and an automated process to generate quality measure reports based on these definitions. These quality measure definitions and quality reports can be transmitted over the Nationwide Health Information Network (NW-HIN) to meet regulatory compliance and meaningful use reimbursement requirements.

“SAIC is committed to helping healthcare organizations break down barriers to sharing health information,” said Steve Comber, SAIC senior vice president and business unit general manager. “Our interoperability showcase scenario is an example of how SAIC is applying domain and technical expertise to develop innovative solutions that will help transform healthcare for 21st century requirements.”

In addition to participating in the showcase, SAIC will demonstrate its dynamic On-Line Interactive Virtual Environment (OLIVE) software platform in a series of virtual-world training scenarios. OLIVE enables customers to deploy their own persistent and secure three-dimensional (3-D) virtual worlds where hundreds of users can collaborate over computer networks using a video game-like, 3-D user interface that provides access to a variety of functionality and media. The scenarios include in-hospital medical training for healthcare professionals using realistic, human avatars suffering from trauma and injury; and a unique behavioral healthcare approach that enables deployed personnel to connect with their families and help mitigate the familial, societal, and emotional effects of war.

For more information on SAIC’s participation in the Interoperability Showcase and the live OLIVE presentation, visit SAIC located at exhibitor booth #1950 or go to www.saic.com/himss.

About SAIC

SAIC is a FORTUNE 500® scientific, engineering, and technology applications company that uses its deep domain knowledge to solve problems of vital importance to the nation and the world, in national security, energy and the environment, critical infrastructure, and health. The company’s approximately 45,000 employees serve customers in the U.S. Department of Defense, the intelligence community, the U.S. Department of Homeland Security, other U.S. Government civil agencies and selected commercial markets. Headquartered in McLean, Va., SAIC had annual revenues of \$10.1 billion for its fiscal year ended January 31, 2009. For more information, visit www.saic.com. SAIC: From Science to Solutions®

Statements in this announcement, other than historical data and information, constitute forward-looking statements that involve risks and uncertainties. A number of factors could cause our actual results, performance, achievements, or industry results to be very different from the results, performance, or achievements expressed or implied by such forward-looking statements. Some of these factors include, but are not limited to, the risk factors set forth in SAIC’s Annual Report on Form 10-K for the period ended January 31, 2009, and other such filings that SAIC makes with the SEC from time to time. Due to such uncertainties and risks, readers are cautioned not to place undue reliance on such forward-looking statements, which speak only as of the date hereof.
