

SAIC Cryptographic and Security Testing Laboratory Accredited by The National Institute of Standards and Technology

February 4, 2008

Company Accredited to Assess Federal Desktop Security Compliance Software

SAN DIEGO and MCLEAN, Va., Feb 04, 2008 /PRNewswire-FirstCall via COMTEX News Network/ -- Science Applications International Corporation (NYSE: SAI) today announced that its Cryptographic and Security Testing Laboratory (CSTL) has achieved National Institute of Standards and Technology (NIST) accreditation to perform Security Content Automation Protocol (SCAP) testing.

The SAIC CSTL is one of the first laboratories accredited in this new security assurance program. The U.S. Office of Management and Budget mandated that government agencies use SCAP-validated tools as of Feb. 1.

SCAP tests and monitors systems for security issues such as software deficiencies, configuration issues and other vulnerabilities. The testing helps to ensure that a computer's configuration is within the guidelines set by the Federal Desktop Core Configuration, a group of security-sensitive configuration settings developed by NIST and the National Security Agency.

"SCAP will enable the company to enhance service to customers by helping Government agencies correct IT security vulnerabilities," said Larry Cox, SAIC senior vice president and business unit general manager.
