

U.S. Cyber Command selects Leidos to deploy unified cyber planning platform

October 28, 2026

RESTON, Va., Oct. 28, 2026 /PRNewswire/ -- U.S. Cyber Command selected [Leidos](#) (NYSE: LDOS) to further develop the first integrated digital platform designed to help cyber operators plan, coordinate, and assess missions through a single, unified environment.

A \$99 million Other Transaction Authority (OTA) prototype agreement was awarded for continued development on this next-generation cyber planning system.

"We've equipped U.S. cyber operators with a platform that has significantly shortened mission planning cycles to less than 24 hours in some cases," said Jason O'Connor, Leidos Intelligence president. "Developed by our Kudu Dynamics team, this technology delivers mission planning, execution and assessment to the cyber mission at speed and scale."

The platform is designed to bring together traditionally separate workflows and tools into a single integrated system. The platform also has a modular architecture that's intended to support integration with government and third-party technologies as mission needs change, allowing for flexibility in how the platform is developed and sustained.

Leidos [acquired Kudu Dynamics](#) in 2025 to expand its cyber technology, engineering and mission-support capabilities. The award advances Leidos' NorthStar 2030 strategy, with [cyber as a key growth driver](#) and an increasingly critical component of how the U.S. military competes and conducts modern warfare across domains.

About Leidos

Leidos is an industry and technology leader serving government and commercial customers with smarter, more efficient digital and mission innovations. Headquartered in Reston, Virginia, with more than 50,000 global employees, Leidos reported annual revenues of approximately \$17.2 billion for the fiscal year ended January 2, 2026.
